PROFESSIONAL SUMMARY

Highly analytical Capital Markets IT Professional with over 8 years of dedicated experience in Tier-2/Tier-3 application maintenance, production support, and real-time environment monitoring for global financial institutions. Proven track record safeguarding high-throughput equity derivatives trading platforms, managing complex End-of-Day (EOD) financial processing pipelines, and optimizing risk/PnL validation flows. Expert batch monitoring, database diagnostics, and batch scheduling via Control-M and AutoSys. Exceptionally skilled at leading high-pressure incident triage, executing post-hours platform releases, and building automated scripts to protect strict SLA thresholds.

TECHNICAL CORE COMPETENCIES

Capital Markets Domains

Trading Environments, Credit Derivatives, Fixed Income/Bond Tools, PnL & Real-Time Risk Processing, End-of-Day (EOD) Financial Pipelines, Lifecycle Management of Trades, Corporate Actions

Databases & Data Integrity

SQL, Oracle, SQL Server, MongoDB (NoSQL), Oracle Data Integrator (ODI), Data Validation Models

Automation & Programming

Python (Support/Automation workflows), Shell Scripting, C++, Batch Automation, Standard Operating Procedures (SOPs)

Cloud & Modern Infrastructure (Upskilling / Academic)

Azure Cloud Ecosystems, Red Hat OpenShift Container Platform (OCP) Architecture, Kubernetes Core Concepts (Pods, Nodes, Cluster Monitoring Foundations), Windows Containers, Dynatrace Observability Foundations

Monitoring & Scheduling

ITRS Geneos, Control-M, AutoSys, Dynatrace, ServiceNow, Jira, Confluence (Knowledge Base Maintenance), Remedy, Batch Scheduling, System health indicators

OS & Core Infrastructure

UNIX, Linux, Windows Server, Disaster Recovery (DR) Testing, Vulnerability Remediation

Stakeholder & Incident Communication

High-pressure triage orchestration, real-time war room facilitation via Google Meet/MS Teams, corporate telephony escalations, and strict Severity-1 SLA communication frameworks

ITIL Process Governance

Incident Management, Problem Management, Change Management, Knowledge Management & Runbook Creation, Disaster Recovery (DR) Orchestration, Root Cause Analysis (RCA), SLA Compliance Tracking, and Cross-Functional Stakeholder Communication frameworks.

PROFESSIONAL EXPERIENCE

Technical Upskilling & Relocation Sabbatical

- Relocation & Operational Readiness: Managed a strategic career pause during international family relocation to the USA and subsequently Canada; successfully secured a valid Canadian Open Work Permit ensuring immediate availability for local corporate employment.
- Advanced Academic Qualifications: Completed an online Master of Business Administration (MBA) in Project Management, mastering frameworks for enterprise risk mitigation, Knowledge Management systems, matrixed stakeholder communication, and complex software deployment lifecycles.
- Production Automation Engineering: Engineered a portfolio of public, cloud-hosted Python automation frameworks designed to resolve critical financial infrastructure failures.

-EOD Market Data Validator: Simulates real-time data integrity scans, isolates trading application pricing outages, and outputs structured JSON payloads for ServiceNow/Jira routing .

03/2022 – Present
Columbus, IN, USA &
Mississauga, ON,
Canada (Relocation)

- Batch Dependency Checker: Audits upstream data feeds, isolates o-byte transfer corruptions, and triggers automated downstream process blocks.
- Health Dashboard Aggregator: Pulls real-time hardware metrics (CPU load, memory thresholds, disk limits) into unified monitoring layers.
- Enterprise Architecture Upskilling: Completed extensive technical training paths focused on modern cloud infrastructure, gaining hands-on exposure to Azure cloud ecosystems, cloud data validation models, log analysis via Elastic/Kibana, Red Hat OpenShift (OCP) architecture, Kubernetes core scheduling, and Dynatrace observability frameworks.

Senior Analyst

Pioneer Financial and Management Services Limited

11/2021 – 02/2022
Pune, India

- Delivered Tier-2 production support operations for high-throughput corporate financial transaction applications, safeguarding real-time data flow integrity.
- Monitored end-to-end system health indicators using SQL diagnostics, resolving data-load errors and engineering daily health checklists to maintain strict SLA thresholds.
- Utilized corporate ticketing workflows to classify, prioritize, and isolate application bugs, collaborating directly with engineering and downstream infrastructure vendors.

IT Analyst

Tata Consultancy Services Ltd (TCS)

01/2012 – 05/2020
Pune, India

- Managed L2 application support for large global financial accounts, safeguarding front-office trading environments, credit derivatives, and bond tools while consistently meeting all strict SLA targets.
- Monitored real-time system windows to manage critical Risk updates, PnL calculations, and End-of-Day (EOD) financial processing pipelines.
- Identified and remediated production performance slowdowns, negative system trends, and database deadlocks using advanced SQL scripts to quickly restore high-visibility environments.
- Built, maintained, and optimized enterprise batch schedules using Control-M and AutoSys to orchestrate seamless trade processing cycles and automation workflows.
- Configured and actioned automated alerts via enterprise monitoring platforms (including ITRS Geneos) to maximize trading infrastructure availability and prevent recurring system issues.
- Built custom automated Shell scripts to replace manual system verification checks, significantly reducing operational overhead and processing timeline delays.
- Executed full system integration testing, software upgrades, infrastructure application configurations, and routine system setups.
- Executed weekend platform releases, infrastructure upgrades, and comprehensive Disaster Recovery (DR) testing scenarios, adapting workflows for hybrid Windows/Cloud architectures to guarantee zero business downtime.
- Tracked and managed incidents using Remedy and ServiceNow; spearheaded detailed Root Cause Analysis (RCA) investigations alongside product managers to build comprehensive incident records.
- Gathered and translated complex business and technical requirements into working enterprise IT solutions while strictly adhering to corporate security, access-control, and data-protection policies.
- Spearheaded organizational Knowledge Management initiatives; Authored, updated, and finalized technical documentation, comprehensive Standard Operating Procedures (SOPs), detailed support performance reports, and tactical optimization recommendations.
- Facilitated structured onshore/offshore shift handovers utilizing daily sync calls, detailed end-of-shift reporting, and cross-regional verbal walkthroughs of active Severity-1/Severity-2 blocks to eliminate continuity gaps.
- Orchestrated high-pressure incident response rooms and emergency meetings over Google Meet during critical outages, bridging communications between impacted trading desks, development, network, security teams, and backend vendors.

- Handled urgent business stakeholder escalations across phone, email, and Google Meet; established a strict 15-minute update rule during Severity-1 incidents to reduce communication friction, resolve difficult complaints with empathy, and maintain strict SLA continuity.

EDUCATION

Master of Business Administration (MBA) in Project Management

2020 – 2022

D.Y. Patil Vidyapeeth

Pune

Grade: 88.96% / CGPA: 7.85

Bachelor of Engineering (B.E.) in Electrical & Electronics Engineering

2007 – 2011

NIET

Greater Noida, India

Score: 70.61%

CERTIFICATIONS & RECOGNITIONS

Dynatrace Essentials Certificate – Cloud Observability Foundations

09/2026

Certificate of Completion: Kubernetes: Microservices

09/2026

LinkedIn Learning

Certificate of Completion: Getting Started with ServiceNow: Navigation, Task Management, and Data Visualizations

09/2026

Certificate of Completion: Practice It: SQL Joins

09/2026

LinkedIn Learning

Microsoft Azure Essentials Professional Certificate

09/2026

Microsoft & LinkedIn

MongoDB for SQL Experts

08/2026

MongoDB University Credential ID: MDBb7gywbw8go

Generative AI for Everyone

2026

DeepLearning.AI

On-Spot Delivery Excellence Award

2016

Tata Consultancy Services

Service and Commitment Award

2015

Tata Consultancy Services

ITIL Foundation Certified

2013

ITIL Core Framework

PROJECTS

End-of-Day (EOD) Market Data Validator & Incident Routing Engine [🔗](#)

This production support utility mimics a critical Capital Markets IT environment data-integrity sentinel. It is engineered to process daily End-of-Day (EOD) market transaction feeds, systematically parse data validation streams, and isolate production-impacting anomalies before systemic risks compromise downstream trade processing layers, Risk engines, or PnL processing pipelines.

- **Missing Data Extraction:** Identifies empty records in critical pricing or trade execution volume fields.
- **Business Logic Breach Isolation:** Flags negative value errors that violate financial trading boundary frameworks.
- **Market Variance Detection:** Triggers real-time alerts for sudden high-volatility pricing data spikes.
- **Enterprise Alert Integration:** Outputs formatted data log reports and mimics a JSON payload transmission structure ready to seed downstream ticketing systems like ServiceNow or Jira.

System Health Dashboard Data Aggregator [🔗](#)

This production support tool functions as a automated morning system health checker. It aggregates critical infrastructure infrastructure metrics—such as CPU load performance, memory allocation parameters, and disk space limits—across production clusters before operational processing windows initiate.

If any hardware profile falls past set baseline safety parameters, the application flags a warning tier exception and generates programmatic system optimization recommendations to avoid potential runtime outages.

- **Telemetry Aggregation:** Collects hardware usage variables into a single data layer.
- **Resource Boundary Tracking:** Monitors disk space limits (< 15%) and CPU core saturation limits (> 90%).
- **Proactive Maintenance Alerts:** Generates actionable instructions for infrastructure support agents.
- **Unified Schema Design:** Outputs diagnostic text files and structural JSON models ready to feed downstream reporting engines.

EOD Batch Schedule Dependency Checker

This production support tool functions as a pre-flight guard rail for enterprise batch scheduling streams (like Control-M or AutoSys). It validates the physical availability and structural capacity volume of upstream data prerequisite files.

If an incoming trigger file is discovered to be completely missing or registers as an empty 0-byte data corruption failure, the engine automatically halts the downstream lifecycle path to guarantee zero corruption in the core Risk and PnL reporting frameworks.

- **Prerequisite Validation:** Audits directory pathways for specific structural data flag files.
- **Zero-Byte File Guardian:** Inspects size parameters to trap corrupted or incomplete server transfers.
- **Fail-Safe Processing Controls:** Emits explicit termination signals (HALT_DOWNSTREAM_PROCESS) during exception drops.
- **Enterprise Operations Handoff:** Outputs local tracking logs and creates an actionable JSON data payload format optimized for routing into systems like ServiceNow or Jira.
